PRIORITY CLAIM UNDER RULE 55

The benefit of the filing date in the European Patent Office of a patent application corresponding to the above-identified application is hereby claimed under Rule 55 and 35 U.S.C. 119 in accordance with the Paris Convention for the Protection of Industrial Property. A certified copy of the corresponding patent application bearing Serial No. EP 03026786.8, filed on 21 November 2003, is attached hereto.

Respectfully submitted,

Volker BRASS et al.

T-Mobile Deutschland**5 Additional Information for Voice Group Call Service****Brief description**

The Additional Information for Voice Group Call Service (VGCS) is designed to provide all active members of a VGCS in
10 parallel to the voice group call (VGC) with additional information (e.g. tactical addresses of the current talker). The information contained here may have a text-oriented or binary-oriented character.

The transmission of the additional information shall be realised only in acknowledged mode and is sent on the Slow Associated Control Channel (SACCH), which represents an associated control channel for the traffic channel of the voice
15 group call.

20 1. Proposed Implementation

The MSC triggers via an appropriate message (e.g. additional-information-request-message) on the A-interface the BSS to send the additional information. This message contains at least the additional information itself. The VGC-ID or VGC-
25 Reference represents an optional part of this message. In the case where this message is sent on the controlling SCCP-connection of the VGC the addressing which VGC is meant is not necessary.

In addition to this the additional-information-request-
30 message can be sent on the resource controlling SCCP-connections.

After that the BSS sends the information on the SACCH of all TCHs where the VGC is ongoing. The provisioning of the addi-

tional information in cells which are belonging the VGC-area but a VGC-channel is not established is not necessary.

In the case that the additional information is sent on the controlling SCCP-connection, the BSS is responsible to sent the additional information on all SACCHs for this VGC. After having done the BSS provides an information to the MSC that the additional information was sent to the MSs. This information does not confirm that the members of a voice group call has received the message itself.

10 In order to give an indication that the additional information is at least received by the current talker, he may send the acknowledgement on the Uplink-SACCH for this VGC.

20	BSS	Base Station Subsystem
	MS	Mobile Station
	MSC	Mobile Switching Centre
	SACCH	Slow Associated Control Channel
	SCCP	Signalling Connection Control Part
25	TCH	Traffic Channel
	VGC	Voice Group Call
	VGCS	Voice Group Call Service

Patent claims

5

1. Method for providing the active members of a Voice Call Group Service with additional informations characterised by that the messages are transmitted on the associated control channel for the traffic channel of the voice group.

10

2. System for providing members of a Voice Call Group Service with additional informations characterised by signal processing units for speech transmitting purposes in combination with signals processing units for dedicated text-and/or
15 binary signal transmission.
